

Cipher  
ABCDEFGHIJKLM  
NOPQRSTUVWXYZ

I am using the reflect method of cipher. For example a would be equal to n.

I love cryptography - V ybir pelcgbtencul

### Part 3

Facebook had a data breach back in 2019. The information from the data breach made over five hundred fifty three million users have their information go public. Some of the information that was leaked was Facebook Ids, name, dates of birth, gender, location, and more. The company claims the breach came from scraping and not a cyberattack. Scraping is when an automated software lifts publicly available data from the internet resources. Facebook has since updated the contact importer to hinder future scraping efforts, but the information already gathered is now out there.
